PREFACE

This is the first comprehensive annual report on vital statistics to be issued for Canada. The statistics have been collected and compiled under a co-operative arrangement between the Dominion Bureau of Statistics and the provincial registration departments, arrived at after conference in 1918. A brief account of the origin and purpose of this arrangement and of previous developments in Canadian vital statistics may be of interest here.

It is unnecessary to emphasize the importance of vital statistics and of their co-ordination on a national basis. Not only are they needed in the prevention of crime and in facilitating the transfer of property, but they lie at the basis of public hygiene and of all study of the most important asset of any community—its people. With the census (which is the national stock-taking), and migration statistics (which record the changes through movements into and from the country, as vital statistics record the changes due to natural causes), they complete the general scheme of population statistics. Vital statistics are therefore named under the Statistics Act, 1918, among subjects to be treated annually by the bureau, in recognition of their national bearing and of the fact that even for purely local application they must rest on the broadest possible basis.

Prior to 1920 the only vital statistics in Canada were those of certain Provincial Governments. These, however, were not available for national purposes. One province did not maintain provincial records of births and deaths. In the others legislation and methods differed widely; for instance, the international classification of deaths was not universally followed, and each province had its own scheme for the collection, compilation and presentation of results. Of the twenty-four items which the death certificate usually calls for, two provinces omitted sixteen, another fifteen, and another thirteen. Standards of administration, *i.e.*, the degree of enforcement of registration, differed between provinces, and sometimes within the same province from year to year. Thus, whilst it was possible to assemble certain totals, the latter were incomplete and otherwise inadequate to the purposes of a national system of vital statistics.

Two attempts had been made in the past to remedy this situation. In the year 1882 the Dominion Government instituted a plan for recording annually the mortuary statistics of cities of 25,000 and over, by subsidizing local boards of health to supply the necessary information under special regulations. A beginning was made with the five cities of Montreal, Toronto, Hamilton, Halifax and St. John, but by 1891 the list had grown to twenty-five. At that time the only records of births and deaths were those of the municipalities. With the organization of provincial records, the Dominion work was abandoned. Significantly enough, however, its discontinuance was marked by a conference of Dominion and provincial officials summoned in 1893, which passed a resolution calling upon the federal and provincial authorities to co-operate in the work of collecting, compiling and publishing the vital statistics of the Dominion.

The other attempt to meet the situation was made through the medium of the census. Under the original Census Act, a schedule covering the number and causes of the deaths occurring in each household during the preceding year was included in each Census. The results, however, proved abortive; probably one-fifth of the record was missed, whilst the information on the all-important matter of the cause of death was unsatisfactory. The reasons may be set down to the migration of population, lapse of memory or knowledge in the persons supplying the data, and lack of training in the census enumerators. Even had

the results been otherwise, mortality statistics at ten year intervals are of diminished value. Moreover birth statistics and marriage statistics are not less important than death statistics. The inability to obtain accurate vital statistics through the census has been recognized for many years in the United States, France, Germany and other countries.

The remedy accordingly which the bureau invoked in attacking the problem of vital statistics on its establishment in 1918 lay in the direction indicated in 1893 namely, the framing of a plan for permanent Dominion and provincial co-operation. A memorandum, to which were attached a model provincial bill and model forms of registration, was first drawn up, based on thorough examination of existing vital statistical legislation and administration in the provinces and in other countries. This memorandum was laid informally before the provincial departments, from several of whom valuable criticisms and suggestions in reply were received. Briefly, the plan put forward by the bureau involved (1) that each province should bring its legislation and administration to the standard indicated, (2) the bureau to act (*a*) as intermediary agent for the maintenance of the standard and (*b*) as clearing house for the compilation and tabulation of results. In the latter connection the bureau undertook to supply the standard forms to the provinces free of charge and to pay the provinces the cost of transcription in supplying the bureau with copies of returns. It was not suggested, of course, that the provinces surrender the right of individual treatment; or of independent compilation and publication; the standard proposed was a minimum only, the general plan being based on that of the United States and other countries whose forms of government and institutions approximate to those of Canada.

After preliminary consultation as above described the bureau in June, 1918, called a conference of officials at Ottawa for final discussion and decision. In addition to the representatives of the provincial departments, who with those of the bureau constituted the principals of the conference, the Dominion Departments of Insurance and Immigration, the Dominion Board of Pensions and the Commission of Conservation were represented, whilst in addition delegates were invited from the American Society of Actuaries, the Canadian Medical Association, the Union of Canadian Municipalities, and the Municipal Improvement League of Canada. The conference also had the benefit, through the courtesy of the United States Census Bureau, of the presence of the Chief of the Division of Vital Statistics of the United States Census.

The agenda of the conference consisted of four main items; First, the principle of registration was affirmed, with its corollary, the cessation of the decennial mortuary census. Secondly, the general principle was endorsed of Dominion and provincial co-operation under a scheme of uniform legislation and administration. Third, the Model Bill and schedules were discussed in full detail and approved as amended. Finally, the action to be taken by the Dominion Bureau of Statistics was defined in the form of a draft order in council. The text of the resolutions passed by the conference and of the order in council as finally approved and passed by the Cabinet under date of April 22, 1919, are appended.

Since the holding of this conference consistent progress has been made in carrying the scheme into effect. The provinces of Nova Scotia and Prince Edward Island enacted the Model Bill into legislation with such changes as were necessary to meet local conditions. New Brunswick is empowered under its Health Act to provide the necessary machinery for collecting vital statistics by regulations approved by order in council, and these regulations have brought into effect the important features of the Model Bill. In Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, the existing legislation was amended, where necessary, to bring it into conformity with the principles of the Model Bill. All the co-operating provinces require the returns of births and deaths to

be made on standard certificates, approved and supplied by the Dominion Bureau of Statistics. In the case of Quebec (not included in Registration Area), the principles of the Model Bill have not yet been adopted nor are the returns of births, deaths and marriages made on the standard forms supplied by the Bureau of Statistics.

The report now presented covers births, deaths and marriages for the registration area for the year 1921. It may be added that future reports will present the material in somewhat fuller detail and will incorporate certain analyses which have not been found possible in the first year's operations. It is also the intention of the bureau to bring out periodic interim reports, especially with regard to mortality in the cities, as soon as the organization of the work has been sufficiently perfected.

The collection of the data and the preparation of the report were under the direction of Mr. E. S. Macphail.

R. H. COATS,
Dominion Statistician.

Dominion Bureau of Statistics,

NOTE 1:—RESOLUTIONS OF CONFERENCE ON VITAL STATISTICS, 1918

Omission of Mortuary Statistics from the Schedules of the Decennial Census.—Resolved, that this conference, having reference to the mortuary statistics obtained by the censuses of 1901 and 1911, approves of the intended action of the Dominion Bureau of Statistics in omitting inquiries *re* mortuary statistics from future censuses.

Dominion and Provincial Co-operation.—Resolved, that the organization of a system of vital statistics for Canada is imperatively demanded at the present time, such statistics (*a*) to include births, deaths and marriages; (*b*) to be on an annual basis; and (*c*) to be collected, compiled and published in a manner which will permit comparison to be made between different localities and provinces throughout the Dominion and between Canada as a whole and other countries.

That such statistics can best be secured by Dominion and provincial co-operation, following the procedure indicated in the The Statistics Act, clauses 9 and 34.

That the general principle of such co-operation be (1) the enactment of uniform legislation and the adoption of uniform methods of administration by the provinces; and (2) an engagement on the part of the Dominion Bureau of Statistics (*a*) to use its machinery as a centralizing and unifying agency and to collaborate with the provinces in a mutually satisfactory way in the collection, compilation and publication of vital statistics; and (*b*) to secure all necessary data in taking the population census.

Standardization of Provincial Vital Statistics.—Whereas it is essential to a satisfactory scheme of vital statistics that the Acts, forms, regulations, etc., of the several provinces should agree in general principles and should provide for systems of registration in accordance with a uniform plan, and that there should be a uniform standard of statistical and general efficiency in order that conditions in every province may be submitted to analysis and comparison with those of other provinces or other communities similarly situated.

And whereas it is the opinion of this conference, that, in order to secure co-operation between the Dominion and provincial authorities, as in the United States, Australia and other federated communities, the first step is to establish legislative and administrative standards for the provinces.

Be it therefore resolved: (*a*) that the draft Vital Statistics Act, subject to amendment by the committee appointed at this conference, with the forms appertaining thereto, be accepted as the basis for securing uniformity of legislation in each province, with such changes in wording and content as may be necessary to suit local conditions, provided, however, that the clauses relating to administration and to schedules and forms being part of the Act be accepted without material change;

(*b*) That the "Rules of Statistical Practice," as adopted by the American Statistical Association, be adhered to *mutatis mutandis* in regard to deaths and births;

(*c*) That mortality statistics be collected in accordance with the International Nomenclature of Causes of Death;

(*d*) That it is desirable no changes in the Act, regulations or forms agreed upon for the collection of vital statistics should be made by any province without submitting copies clearly outlining such changes and the reasons why they are contemplated to the Dominion Statistician, who shall immediately communicate copies of the intended amendments to the various provincial governments, and further, that such changes should not be put into effect if they will in any way lessen the merits or alter the scope of the information agreed upon as essential to a scheme of national vital statistics.

NOTE 2:—ORDER-IN-COUNCIL RE VITAL STATISTICS APPROVED BY DOMINION GOVERNMENT (P. C. 693), APRIL 22, 1923

Whereas the Acting Minister of Trade and Commerce reports that for the purpose of devising means to prevent duplication of work, and to insure uniformity of methods of collecting, compiling and publishing the statistics of marriages, births and deaths, as between the Dominion Bureau of Statistics and the Vital Statistical Branches of the Provincial governments, two conferences—one in June, 1918, and the other in December, 1918,—were held between officers of the branches named, at which it was agreed as follows:—

(1) That the Model Vital Statistics Act prepared by the Dominion Bureau of Statistics, as ratified at the conferences aforesaid, should form the basis of the vital statistical legislation of the several provinces;

(2) That the provinces should undertake to obtain the returns of marriages, births and deaths on the prescribed forms, as approved and adopted at the December conference, the Dominion Bureau of Statistics to supply the forms free of charge;

(3) That the provinces should forward to the Dominion Bureau of Statistics at such times as might be agreed upon, either the original returns of births, marriages and deaths or certified transcripts of the same; the Dominion Bureau to undertake the mechanical compilation and tabulation of the same.

Therefore, His Excellency the Governor General in Council, in order to provide a mutually satisfactory basis of co-operation between the Minister and the Registrars General of the several provinces as above outlined, is pleased to approve and doth hereby approve of the following regulations:—

REGULATIONS.

1. The Dominion Bureau of Statistics may receive transcripts or certified copies of the original returns of marriages, births and deaths made by the clergymen, physicians, undertakers or other persons upon whom it is incumbent to make such returns.

2. These copies are to be forwarded by the provincial department charged with the execution of the Vital Statistics Act in each province to the Dominion Bureau of Statistics quarterly or monthly on dates to be agreed upon.

3. The Minister may for each properly filled in transcript or copy of original return of each birth, marriage or death, pay to the Registrar General such remuneration as may be mutually agreed upon. He may also print and supply free of charge, the prescribed forms upon which the returns shall be made to the registrars by clergymen, physicians, undertakers, etc.

4. Nothing in the preceding sections shall preclude an arrangement between the Bureau of Statistics and any provincial department whereby the original returns may be forwarded to the Bureau for transcript, compilation and return in order to avoid duplication of work and office expense.

5. The Bureau of Statistics shall compile, tabulate and publish the vital statistical data for the Dominion as a whole, and may furnish monthly or quarterly compilations, according to a stated plan to each province of the data appertaining thereto.

6. The Bureau of Statistics shall co-ordinate the statistics of immigration and emigration with vital statistics, and shall undertake, when taking the census of population, to secure the data required for vital statistical purposes and to compile the same.

7. The Minister may, from time to time, out of the vote for the Bureau of Statistics, devote a sum not exceeding $2,000 to pay the expenses of one representative from each province to attend at Ottawa, a conference of vital statisticians. Such conference shall be for the purpose of bringing about a closer official and personal association of the registration officials of the several provinces and of increasing co-operation between Government bureaus, and other organizations interested in the improvement and use of vital statistics and of promoting the introduction of effective systems of registering vital statistics for public health and legal purposes, including the revision from time to time of the classification of causes of death; aiding in the maintenance of uniform methods of collecting, preserving, correcting and compiling registration records and of publishing the statistical data derived therefrom; and in general of promoting a proper appreciation of the necessity and importance of vital statistics.

8. The Minister may, after each decennial revision of the International Classification of Diseases and Causes of Death have prepared a "Manual of the International List of the Causes of Death", to contain (1) the terms of the French List or as many of them as may be properly used in English, (2) the terms founded upon medical certificates of causes of death as reported by Canadian physicians.

9. The Minister may also prepare and supply free of charge to Provincial Registrars for distribution to all duly qualified physicians in the Dominion, a Physician's Pocket Reference to the International List of Causes of Death.

10. The provisions of the foregoing regulations shall apply only to such provinces as shall adopt the "Model Act", as the basis of their legislation on vital statistics or have enacted legislation which conforms to the salient features of the "Model Act", and provided that the forms supplied by the Dominion Bureau of Statistics shall be used in obtaining the original returns, provided further that each province shall furnish satisfactory evidence that it received returns of at least 90 per cent of all marriages, births and deaths occurring in each calendar year.

The Minister hereinafter referred to, shall be the Minister of Trade and Commerce.

(Sgd.) RODOLPHE BOUDREAU,
Clerk of the Privy Council.

VITAL STATISTICS, CANADA, 1921

FIRST ANNUAL REPORT

General Summary

This report presents the statistics of births, deaths and marriages for the eight provinces—Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—co-operating with the Dominion Bureau of Statistics in producing a national vital statistic. The actual population in the Registration Area as of June 1, 1921, was 6,414,654, or more than 73 per cent of the total population of the organized territory of the Dominion.

Births

The total number of living births reported in the Registration Area for 1921, was 168,979, of which 165,036 were single births; 1,937 twins (3,874 infants) and 23 triplets (69 infants) as against 166,741 births in 1920, of which 162,800 were single births; 1,921 twins and 33 triplets. The proportion of male to female births in every 1,000 children born alive was 516 to 484 in 1921, as compared with 514 males to 486 females in every 1,000 in 1920.

The crude birth rates for both 1920 and 1921 were very similar, being slightly lower for the latter year. The net natural increase to population in the eight provinces was 101,257 in 1921, as compared with 89,019 in 1920.

Table 4 shows the percentage of living births reported for each province in 1921 which were male and female, together with the proportion of male to female births. Prince Edward Island is the only province in which the number of female births exceeds male births.

Infantile Mortality

As infant mortality rates are based on the number of births a consideration of infant mortality in relation to birth statistics is essentially necessary. Tables showing deaths under one year of age for each province will be found in the Mortality section.

More than 10 per cent of all children born in 1920 died in the first year of life. In 1921 the proportion dropped to 8.8 per cent, or 14,893 deaths in a total of 168,979 births. Deaths of children under one year of age constituted 22.0 per cent of all deaths in 1921, as compared with 21.5 in 1920. In nearly every province the infantile death rate per 1,000 living births is lower in 1921 than it was in 1920.

In table 6 it is assumed that the deaths reported are for children who were born in the year under review. As a matter of fact, the deaths of children under one year reported for the calendar year 1921 could not in every instance have reference to a birth for the same period. But taking one year with another, the figures of the table fairly represent the relation between the number of infant deaths occurring in any one year with the number of births reported in the same period.

The table shows that while male births exceeded female births by 5,289 yet, owing to the greater mortality among male infants, their net advantage at the end of the year was only 3,066. For the registration area, the ratio of deaths to 1,000 births was 98 for males, as against 77 for females, and 88.1 per 1,000 births, both sexes.

Maternal Mortality

Maternal mortality being closely related to the incidence of birth a summary of the statistics relative thereto is given in tables 8 and 9. Table 8 classifies deaths from this cause by age of decedents for each province; it also shows the death rate per 1,000 living births. Table 9 distributes the deaths according to reported "Cause of Death."

Mortality (all causes)

The total deaths, all ages, in a population of 6,414,654 is placed for 1921 at 67,722, being a crude death rate per 1,000 population of 10·6 as compared with a total mortality of 77,722 in a population of 6,296,000 and a rate of 12·3 per 1,000 in 1920. A decrease in both total numbers and rates as shown for every province.

According to table 11, the number of male children born in 1921 exceeded the total male deaths for the year by 50,723, while the gain in the female population during the same period was 50,534. That is to say, while the number of male children born exceeded the females by 5,289, yet, owing to the higher mortality among males as compared to females 98:77, the net increase for the year of the male over the female population in the registration area was reduced to 189.

More than 70 per cent of all deaths reported in 1921 were credited to twenty diseases listed in the following table. "Diseases of the heart" heads the list with nearly 9 per cent of all deaths, followed by cancer with 7.13 per cent, and tuberculosis with 7.07 per cent of the total mortality in the Registration Area. There were 37 more deaths reported from cancer than from tuberculosis.

Tuberculosis

Deaths assigned to tuberculosis affections in the aggregate numbered 4,789, 2,439 males and 2,350 females. The mortality rate for the registration area amounted to 747 per million people. The crude rate per million population in 1920 was 1,131 in England. In Prince Edward Island 106 in every 1,000 deaths were due to tuberculosis, 109 in Nova Scotia, 76 in New Brunswick, 60 in Ontario, 78 in Manitoba, 58 in Saskatchewan, 63 in Alberta and 97 in British Columbia.

Marriages

It is interesting to note that more than 50 per cent of brides and grooms in the western provinces were not Canadian born, while in the eastern provinces in most instances more than 70 per cent were native born. In Prince Edward Island 97 per cent of contracting parties were Canadian born. In Nova Scotia and New Brunswick more than 80 per cent were native born.
